Friends who like to eat instant noodles know it. Instant noodles are not only fast and convenient, but also delicious. Since instant noodles joined the WTO, instant noodle sales have continued to soar. It is said that the more popular the product, the more negative news there will be. The production process of instant noodles has been made public to the media for a long time.

Friends who like to eat instant noodles know it. Instant noodles are not only fast and convenient, but also delicious. Since instant noodles joined the WTO, instant noodle sales have continued to soar. It is said that the more popular the product, the more negative news there will be. The production process of instant noodles has been made public to the media for a long time. And many people still make articles about the instant noodles production process and maliciously fabricate news about the unsanitary instant noodles making production line to intimidate consumers. Of course, authoritative organizations will not sit idly by and it is impossible to spread false news that the instant noodle production process is unsanitary.

It is understood that experts and reporters visited the instant noodle production workshop and the automatic instant noodle production process in secret. It was found that all the staff in the workshop were wearing disinfection masks. Work carefully and discreetly in neat overalls. As

we approached the workshop, we did not smell any pungent chemicals. Through observation, we concluded that the instant noodle production process is divided into six steps, namely mixing noodles, shredding, frying, ordering, bagging, and sealing. The production process of instant noodles in modern industry is more mechanized, which can avoid human pollution. In addition, the country has strict requirements for the production process of instant noodles, and strictly controls both operation and hygiene. A series of sanitary clauses concerning the production process of instant noodles have been formulated! The mechanized instant noodles manufacturing process and nearly airtight supervision completely refute the claim that the production process of small instant noodles is unsanitary.

The noodles making process and the instant noodles making machine is clean and hygienic. Whether it is from the production of noodles, or the preparation of sauce packets, or even the packaging materials and sealing. All use a complete set of steps. During the production of instant noodles, the supervisor strictly requires employees. Don't let a little bit of garbage appear in the workshop, let alone the possibility that the instant noodle production process is unsanitary. Those unscrupulous people just want to use the cake noodles manufacturing process to spread rumors and create panic among consumers and make them reject delicious instant noodles.

In fact, consumers should establish a correct view of right and wrong. Instant noodle businesses act with conscience. The production process of instant noodles is safe and hygienic. With the attention of media and citizens around the world, instant noodles are definitely a delicacy worth enjoying!
